## **CLAIMS**

What is claimed is:

- A hydraulic pressure system for a rotor hub assembly comprising:
  a support structure defined along an axis;
  a hydraulic pump comprising a pump body and a pump shaft;
  said pump body mounted within said support structure for rotation relative said pump shaft.
- 2. The hydraulic pressure system as recited in claim 1, wherein said support structure comprises a flanged cylinder.
- 3. The hydraulic pressure system as recited in claim 1, wherein said support structure comprises a flanged cylinder mounted to a rotor hub assembly.
- 4. The hydraulic pressure system as recited in claim 1, wherein said support structure comprises a flanged cylinder mounted within a main rotor shaft.
- 5. The hydraulic pressure system as recited in claim 1, wherein said support structure comprises a cylinder having a flange extending radially therefrom, said flange mounted to a rotor hub and said cylinder mounted within a main rotor shaft, a cylinder outer diameter of said cylinder spaced away from an inner diameter of said main rotor shaft.
- 6. The hydraulic pressure system as recited in claim 1, further comprising a gear system mounted between said pump shaft and a rotationally fixed standpipe.

- 7. A rotor hub assembly for a rotary wing aircraft comprising: a standpipe mounted along an axis of rotation;
- a main rotor shaft mounted concentric with said standpipe and along said axis of rotation, said main rotor shaft rotationally mounted relative said standpipe; and
- a hydraulic pump mounted along said axis of rotation, said hydraulic pump comprising a pump body mounted for rotation relative a pump shaft mounted to said standpipe.
- 8. The rotor hub assembly as recited in claim 7, wherein said standpipe is mounted for rotation opposite said main rotor shaft.
- 9. The rotor hub assembly as recited in claim 7, further comprising a flanged cylinder mounted within said main rotor shaft, said pump body mounted to said flanged cylinder.
- 10. The rotor hub assembly as recited in claim 7, further comprising a flanged cylinder mounted to a rotor hub assembly, said pump body mounted to said flanged cylinder.
- 11. The rotor hub assembly as recited in claim 7, further comprising a cylinder having a flange extending radially therefrom, said flange mounted to a rotor hub and said cylinder mounted within said main rotor shaft, a cylinder outer diameter of said cylinder spaced away from an inner diameter of said main rotor shaft.
- 12. The rotor hub assembly as recited in claim 11, further comprising a conduit passing between said cylinder outer diameter and said inner diameter of said main rotor shaft.
- 13. The rotor hub assembly as recited in claim 12, wherein said conduit comprises an electrical conduit.

- 14. The rotor hub assembly as recited in claim 12, wherein said conduit comprises a fiber optic cable.
- 15. The rotor hub assembly as recited in claim 7, further comprising a cylinder having a flange extending radially therefrom, said flange mounted to a segment of said main rotor shaft and said cylinder mounted within said main rotor shaft, a cylinder outer diameter of said cylinder spaced away from an inner diameter of said main rotor shaft.
- 16. The rotor hub assembly as recited in claim 15, further comprising a conduit passing between said cylinder outer diameter and said inner diameter of said main rotor shaft.
- 17. The rotor hub assembly as recited in claim 16, wherein said conduit comprises an electrical conduit.
- 18. The rotor hub assembly as recited in claim 16, wherein said conduit comprises a fiber optic cable.
- 19. The rotor hub assembly as recited in claim 7, further comprising a gear system mounted between said pump shaft and said standpipe.
- 20. The rotor hub assembly as recited in claim 7, further comprising a harmonic drive system mounted between said pump shaft and said standpipe.
